

XML to API Migration: Partner Information

Sync ATS jobs to Indeed in real-time

Indeed is moving from XML to API integrations to better serve valued partners like you and drastically improve how data flows within our platforms.

This new, upgraded technology will create a better user experience because, with API-based integrations, data is validated in real-time, resulting in fewer errors. Once you migrate from XML to API integrations, your clients can self-validate the visibility of their ATS jobs on Indeed, which has been a highly requested feature by clients.

Features and Benefits of Job Sync API

In addition to offering a state-of-the-art integration to your users, here are some of the benefits of migrating to Job Sync API:

- ✓ **Job Posting:** Sync ATS jobs to Indeed
- ✓ **Screeners and Qualifying Questions:** Enable Indeed to sync screener and qualifying questions from the ATS
- ✓ **Job Visibility:** Display job visibility status within your ATS platform in real-time
- ✓ **Job Updates:** Update job postings to Indeed in near real-time
- ✓ **Job Expiration:** Expire job postings to Indeed in near real-time

The Job Sync API reduces the time to post jobs by an average of **3 hours***

Job Sync API integration will be the foundation of Indeed's future API integrations, allowing you to stay ahead of the curve.

*Indeed data (WW)

We have seen partners migrate from XML to API in as soon as 4 weeks. For more information on the process, contact **Indeed Marketplace support**.
